“New Higgses at the Electroweak Scale and differential top quark distributions“

Abstract:

Significant hints for new Higgses with masses around 95 GeV and 152 GeV have been accumulated in recent years. In this talk, I will discuss the relevant measurements as well as possible models which can explain these excesses. Furthermore, I show how the new Higgses could explain the deviations between the theory predictions and the measurements of differential top quark distributions.

Zeit: Dienstag, 30.4.2024, 16:15h

Ort: Erwin-Schrödinger-Hörsaal, Boltzmannngasse 5, 5. Stock
